PROFESSIONAL SUMMARY

AI leader with 10+ years across Innovaccer and Barclays, currently leading Innovaccer's Forward Deployed Engineering team — 17 engineers building and deploying healthcare AI agents (voice and chat) into production across health-system and payer workflows. Owns solution architecture, pre-sales, and end-to-end delivery across 15+ concurrent client engagements. Track record of building high-performance engineering teams and shipping AI-driven automation that cut data ingestion timelines from ~30 days to minutes and client activation effort by ~94%. Co-inventor on a US patent filing.

WORK EXPERIENCE

Manager, Forward Deployed Engineering | Innovaccer **Apr 2026 – Present**

- Lead a **17-engineer FDE team** spanning pre-sales, solution architecture, and post-sales delivery of healthcare AI agents on Innovaccer's Gravity AI platform, across **15+ concurrent engagements** with US health systems and payers.
- Deliver **production agents** across the clinical and payer stack: care-management and Medicaid outreach, formulary intelligence, prior authorization, claims and FWA anomaly detection, clinical workforce analytics, and specialist outreach tied to payer corrective-action programs.
- Direct a **12-agent infusion-lifecycle platform** program — clinical intake through denial management — on a 24-month rollout plan spanning **70 sites**.
- Built the **voice-AI delivery practice** (ElevenLabs, Bland AI): multilingual outbound calling, Epic EHR write-back, and clinical compliance logic (APCM enrollment, GLP-1 adherence, GAD-7 screening).
- Own hiring, performance management, and capacity planning; codified agent-build standards (AWS Lambda + FHIR/HealthLake patterns, OpenAPI tool specs) into a **reusable engineering playbook**.

Senior Manager, Tech Transformation | Innovaccer **Jan 2025 – Mar 2026**

- Architected **AI-driven automation of the data engineering journey** — GenAI and advanced data modeling automating joins, mappings, and transformations from business rules and ETL metadata — cutting data ingestion timelines from **~30 days to minutes** of guided workflow.
- Led the Center of Excellence team of **16 data engineers**; reduced time-to-activate (data-to-dashboard) from **34 to 5 story points** in partnership with product and customer success.
- Designed GenAI-based API data-acquisition workflows (CrewAI, Liquid Templates) generating integrations directly from documentation (Swagger, PDF, HTML); upgraded monthly batch processes to **real-time ingestion**.
- Standardized ingestion pipelines across payers and EHRs; established the data quality, stewardship, and observability framework.
- Owned hiring and mentoring for the data engineering organization — requisition approval, candidate evaluation, onboarding — plus cloud cost optimization across AWS and Azure.

Staff Data Engineer, Tech Transformation | Innovaccer **Jan 2023 – Dec 2024**

- Led a high-impact team of **8 data engineers** in the Center of Excellence; cut contract-activation effort from **80 to 34 story points** with organization-wide adoption.
- Standardized known-payer activation to **under 15 days**; engineered clinical data acquisition completing within 10 days — a **20x reduction** in EHR acquisition time using multithreading.
- Pioneered an **industry-first FHIR incremental acquisition** implementation.
- Shipped product features — AutoMapper, Guided Mode, analytics and report-generation automation — and an in-tool service enabling engineers to write custom code and parsers without software-engineering experience.
- Built an AWS/Azure cost analyzer with predictive automations that identified and resolved infrastructure cost inefficiencies.
- Served as escalation specialist for **Code Red** (churn-risk) accounts, delivering error-proof pipelines adopted as the gold standard across projects.

Lead Data Analyst, Analytics | Innovaccer **Nov 2020 – Dec 2022**

- Led a team of **6 engineers** building a Python-based Healthcare Quality Measurement Platform; validated **56 HEDIS 2020 measures** and processed **100GB+ patient data** via distributed workers (Celery, Redis, multithreading, AWS).
- Automated Scala-to-Python migration with a regex-based converter, reducing effort by **80%**.
- Engineered a high-performance parser converting 8GB+ medical files (CSV, TXT, DOC, RTF, HTML) into standardized PDF reports in under 15 minutes; deployed as an on-demand service (AWS, Docker, FastAPI).
- Led an NLP (spaCy, SyTrue) and OCR (Tesseract) data-curation application extracting clinical markers from millions of medical image reports; built an HL7 generator for interoperability.

- Designed the Feature Library Data Pipeline tool — a Databricks-like environment for ML model deployment — later **co-filed as a US patent**.

SAS/Hadoop Tech Lead, Risk Finance & Treasury | Barclays **Jun 2016 – Nov 2020**

- Built model-ready data pipelines (Python, Spark, SAS) for UK Home Finance, UK Cards, US CCAR/CECL, and IFRS9 across **terabyte-scale datasets**; automated data acquisition from **30 person-days to 1**.
- Led the SAS development team delivering an end-to-end IFRS9 calculation engine for **seven multinational portfolios** (10M+ rows each); served as data and process SME for the Hadoop-migration POC.
- Architected a PySpark reconciliation framework with configurable test cases and metrics; automated data-quality reporting through interactive QlikSense dashboards.
- Developed a mule-detection system (scikit-learn, XGBoost) and a Bayesian customer-segmentation model in R for the annual company hackathon.

SKILLS

AI & Agents: GenAI, LLM agents & agentic workflows, voice AI (ElevenLabs, Bland AI), MCP, NLP, OCR, scikit-learn

Leadership: Team building & management (6–17 engineers), hiring & mentoring, pre-sales & solution architecture, stakeholder management, program delivery

Data Engineering: Python, SQL, Spark, ETL/ELT architecture, data pipelines, Hadoop, Hive

Cloud & Databases: AWS (Lambda, HealthLake), Azure, Snowflake, Databricks, MongoDB, PostgreSQL, Oracle

Healthcare: FHIR, HL7, HEDIS quality measures, payer & EHR integrations

Tools: Docker, Redis, FastAPI, Power BI, QlikSense, Alteryx

EDUCATION

B.Tech, Information Technology — Jaypee Institute of Information Technology, Noida **2016 · CGPA 9.0**

PATENT, AWARDS & PUBLICATIONS

- Co-inventor, US patent filing (Innovaccer): **“Method and System for Providing FaaS-Based Feature Library Using DAG”**.
- **Leading By Example Award**, Innovaccer (2023); **Excellence Awards**, Barclays (2019, 2020); **Rising Star of the Year**, Barclays (2017).
- Co-authored research paper **“Data Science: Wisdom of Crowds”** under Prof. Sharad Goel, Stanford University.
